

PurFlo Basket Strainer Packages

PurFlo Strainer Basket Packages are available from stock in three sizes. Each size is modular to the others and because they are made from almost identical components they can be used in systems along with the PurFlo Cartridge filters, PurFlo Carbon Filters and PurFlo Bio-Disc packages. This grouping of like components adds eye appeal o the appearance of the overall system and lends to the feel of professionalism to the entire job.

One high, two high and three high Basket Strainer Packages are standard. Each size is comprised of the PurFlo PVC body, either clear or gray, and, the removable Strainer Basket. The Standard port dimension is 1-1/2" and, it has a female thread. If a 2" port is needed it is necessary to use the optional 2" slip union. Unions can be adapted with an optional 2" or 1-1/2" male threaded tail for use with standard size pump openings.

PurFlo basket Strainers are easy to use. Cleaning out a basket is simply a matter of loosening the stainless clamp ring holding the cover on, removing the basket and dumping the contents. The basket is then replaced inside of the PVC PurFlo basket housing, replacing the lid and, retightening the clamp ring. This procedure takes no more than 3 minutes.
